

BIOGREASE

ALC XT 2

BIOBLEND[®]
SUSTAINABLE PERFORMANCE

BioGrease ALC XT 2 outperforms traditional petroleum-based grease products in lubricity, viscosity index, solvency, polarity, and it has excellent water washout properties.

It is a readily biodegradable, general purpose grease that can be used in a variety of applications for multiple industries.

WHY BIOGREASE ALC XT 2?

Created with a revolutionary, patented microwave technology, this grease offers longer-term stability than conventional products. The high-quality natural ester base oils mean better performance and the aluminum complex thickener provides strong protection against water washout in high moisture operating environments. The extra-tacky properties of this grease increase adhesion to metal surfaces and provide strong cohesion to help prevent “fling off” in the field.

BENEFITS

- + Extra tacky for increased adhesion to metal surfaces
- + Easy to apply - Use with your existing equipment
- + Has a dropping point of over 500° F (260° C) for a more heat stable product
- + Heavy grease - Sticks to wet joints and prevents water washout in high moisture operating environments
- + Prevents rust and corrosion to better protect equipment
- + Usage in equipment that needs a general purpose / EP grease with a higher base oil viscosity (220 cSt)
- + Classified as an environmentally acceptable lubricant (EAL) per EPA standards for biodegradability, toxicity and bioaccumulation in aquatic environments
- + Readily biodegradable (≥60% within 28 days)

The proprietary tackifier in this product makes it ideal for use on pins, bushings, spud rails wire ropes and sheave applications. It is ideal for any application where a release into the environment is possible, such as:

- Dredging
- Marine
- Hydroelectric powered dams
- Construction
- Refuse
- Mining
- Agriculture
- Plant operations

Minimally toxic - provides increased environmental and workplace safety.

Available in drums, kegs,
pails and cartridges
